**Montrose Town Loop Route
And Southern Loop Addition**

This route will take you around the city of Montrose. Uses some busy city streets. Most roads are 2 lane country roads with light automobile traffic. All roads are paved, but will have varied types of paved surfaces in varied conditions. Total route distance is 20.1 miles. Total elevation change is less than 200'. The Southside Loop Addition can be used to add a little more elevation change and would add a few more miles. There is a short section of gravel road that is a few hundred yards long.

Roads south of Sunnyside to the intersection of 6400 Rd and W Main St are narrow, 2 lane back roads with minimal to no shoulder. Hazards can include loose gravel and uneven pavement. Main St. is a busy 4 lane street with no shoulder or bike lane. Overall route is fairly flat. There are a few areas with moderate inclines for short distances. Start in the downtown area. Lots of public parking options near the Vistor's Center. Montrose Visitor's Center is located at 107 S Cascade Ave for area info.
